

Water Use Efficiency Report

For Three Blokes Limited

WAT60370959

WAT60370959 was issued 14 May 2021. The water consent is used for commercial supply by commercial water carriers to households throughout the community as well as inhouse use for propagation of native plants for revegetation & plus other business activities on the site at 362 Matakana Valley Road, Matakana.

Security

The bore site is fully fenced for security and the pump & equipment are housed in secure sheds so that no unauthorised access can be gained.

Water conservation

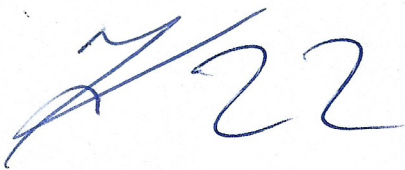

To guard against water leaks and any other damage to the bore equipment & storage tanks the area around the bore and water tanks is monitored on a regular basis (daily) visually and the water usage from the bore is monitored by a telemetry unit which records activity on the bore pump every 15 minutes.

Comparison of Annual water Consumption

The annual water consumption over the 2 years the water consent has been active dropped by nearly 50 % in the second year due to climatic conditions. The first year was the start up year but due to cyclone Gabrielle and the earlier extreme flooding event in January 2023 demand dropped dramatically over what would have been the peak demand for water period for the year. It is anticipated that demand in the current year will increase with the change in the weather pattern.

Note: to be read in conjunction with Annual Water Usage Data Attachment
